Hierarchy of Access Choice……

The reasoning behind 'Hierarchy of Access Choice' is to have a recordable way to show that we are not just defaulting to a scaffold build but rather when the access requirement is scoped it gives the scoper a means to go through a Hierarchy of Choice and look at different types of access that could be applied.

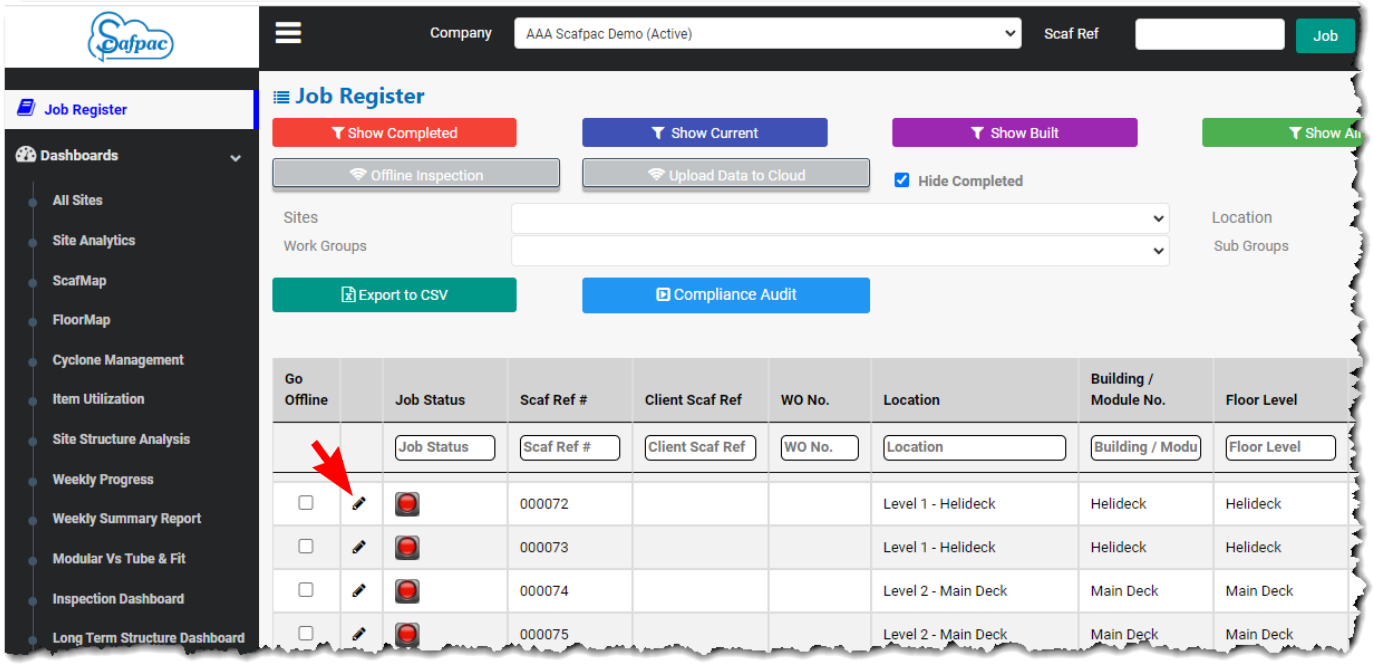

A Tube & Coupler build is the last option in the hierarchy.

To complete a Hierarchy of Access Choice for a job….

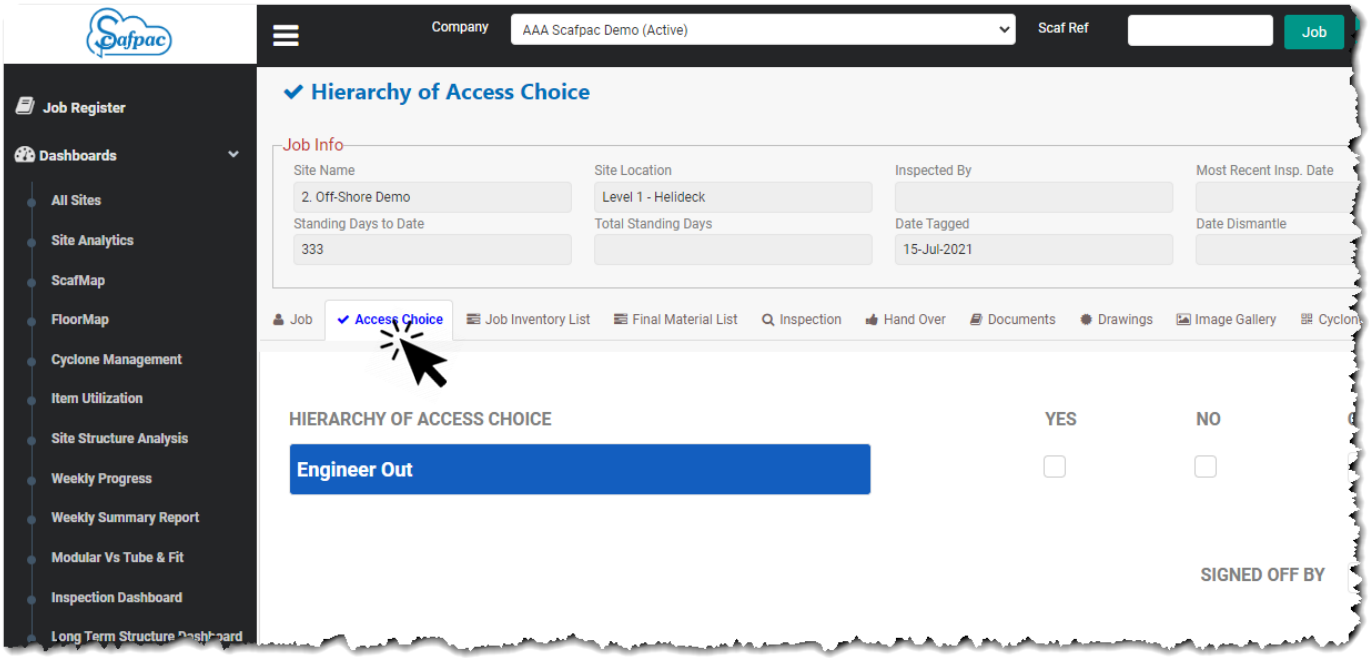

1. 'Click' on the Job Register, (or search for the job if you have the Scaf Ref #.

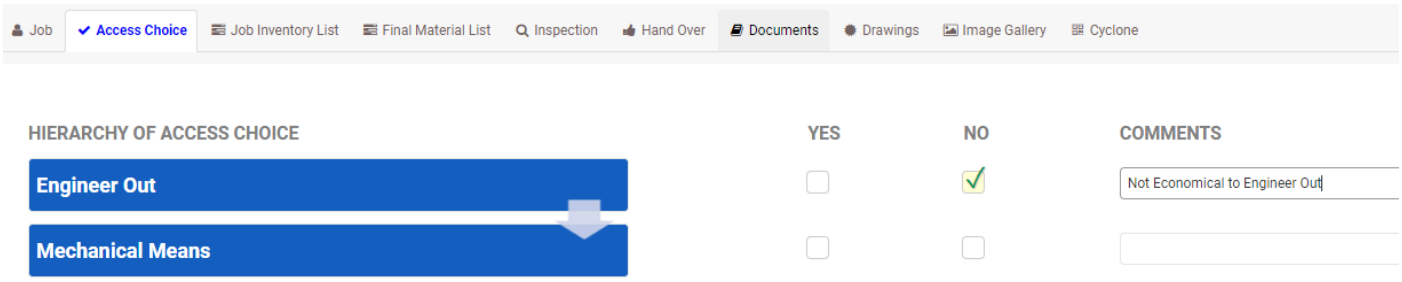

2. 'Click' on the Job Edit icon of the job to be scoped.

3. ‘Click’ on the Access Choice Tab.

4. The first level on the Hierarchy is ‘Engineer Out’. If this is not possible tick the ‘No’ box and enter a reason why e.g. ‘Not economical to Engineer Out’, then press ENTER on Keyboard to go to the next level down, which is ‘Mechanical Means’.

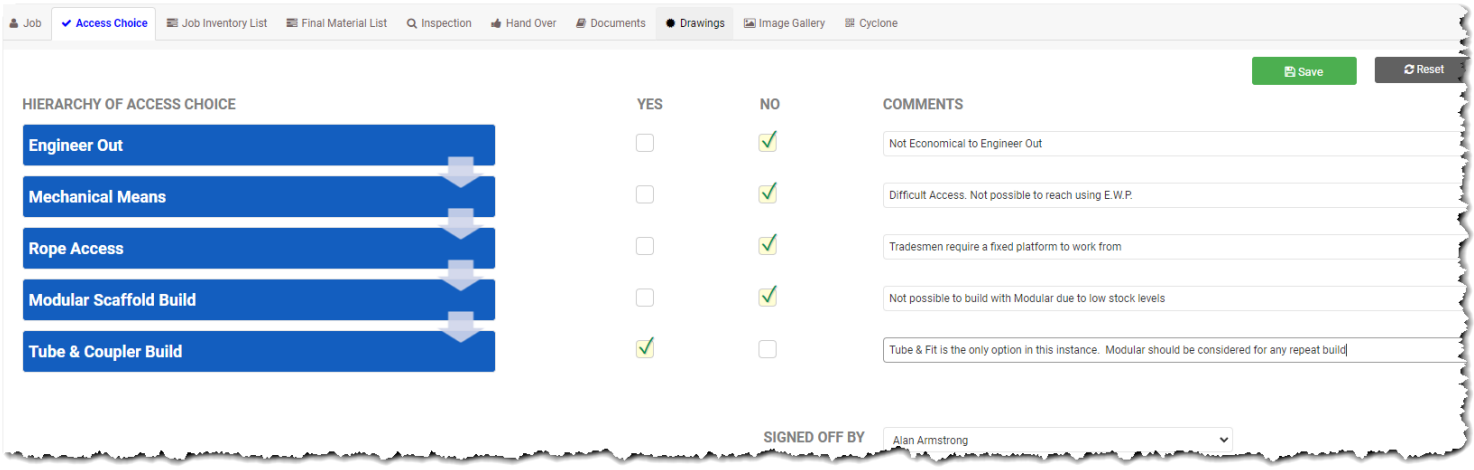

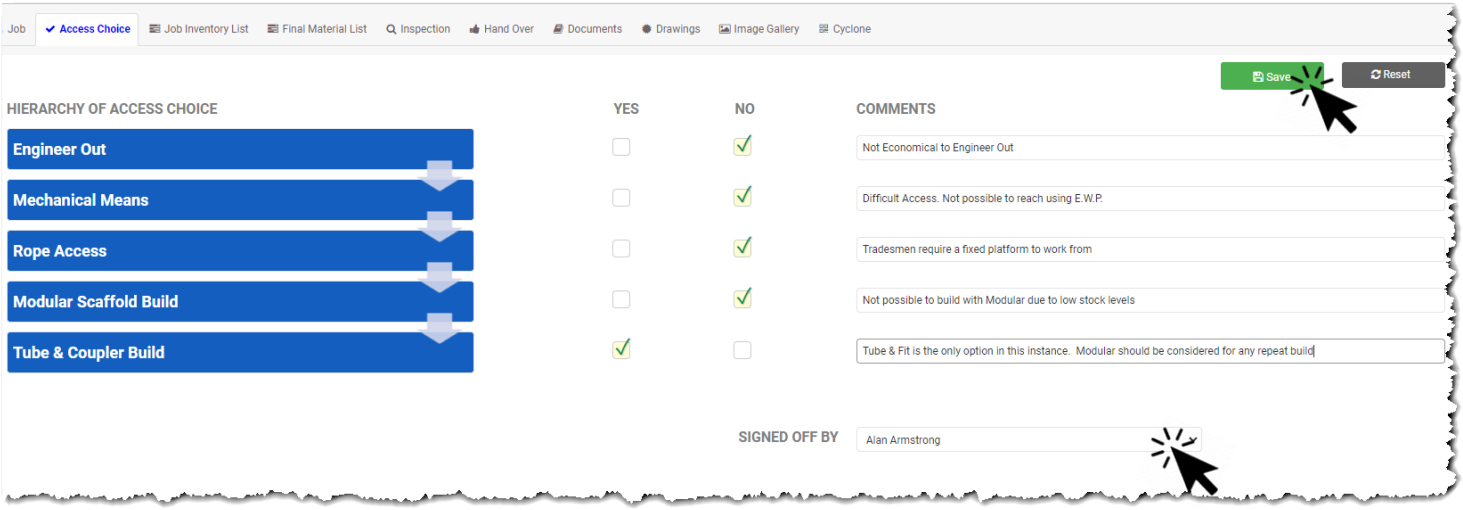

To move down the ‘Hierarchy Structure ‘click’ No, then type a comment in comments section then:

‘**ENTER**’ on keyboard to move down the Hierarchy.

5. Continue to move down the Hierarchy until a suitable Access Option is found.

Once completed enter your name in the Sign Off drop down box, then click on the 'Save' button

QUICK TIPS

Make sure 'Signed Off By' is populated and you 'Save'

Save

Before leaving the page.

Pressing '**Reset**' allows you to start over.

Reset

The Hierarchy of Access Choice **MUST** be completed before a job can be '**LOCKED IN'.**
